(54) Title: METHODS SYSTEMS AND PROGRAMMING FOR SCALED DISPLAY OF WEB PAGES

(57) Abstract: One aspect of the invention can selectively display a web page on a fixed solution screen at first (100) or second scale view (106). The second scale view has a smaller column width, but a font size that is larger relative to the column width. Both views displays a string using fonts that are optimized for their display solution. Another aspect of the invention is similar, but is not limited to use on a fixed solution display and it allows a user to select to change image size, column width, and relative font size as group. The first and second aspects of the invention can be combined. Image size and horizontal displacements can also be scaled. A third aspect of the invention display a web page on a fixed pixel resolution screen with the width and horizontal displacement of a column scaled down, and with pixel optimized fonts.
